Professional Summary

Software Quality Engineer with 10+ years of experience at Samsung Electronics Indonesia, specializing in Google Build Approval, Android software validation, automation engineering, productivity improvement, and engineering workflow optimization.

Experienced in CTS, GTS, CTS Verifier, ADB, Tradefed, firmware flashing, test automation, internal tools development, and multi-device Android validation.

Combines software quality engineering, process automation, Agentic AI, industrial automation, embedded systems, infrastructure, and application modernization to build scalable engineering solutions.

Experienced in Agentic AI workflow development using n8n, Hermes Agent, Ollama, and LM Studio to build autonomous engineering assistants, local LLM-powered workflows, and AI-enabled automation systems.

Skilled in Python, PHP, JavaScript, TypeScript, Rust, SQL, Linux, Docker, Power Automate, AutoHotkey, PLC, SCADA, microcontroller programming, Cloudflare Tunnel, browser extension development, API integration, and Rust/Tauri desktop application development.

Experience

Software QA Engineer

Samsung Electronics Indonesia

Cikarang, Indonesia

Jan 2016 – present

Software QA Engineer under the Product Engineering Department, focusing on Android software validation, Google Build Approval processes, software quality engineering, automation development, productivity improvement, and engineering workflow optimization.

- Performed Google Build Approval testing, including CTS, GTS, CTS Verifier, and Android software validation.
- Developed automation tools and internal web applications to reduce manual effort and improve engineering productivity.
- Managed multi-device Android validation environments using ADB, Tradefed, Linux, and automation frameworks.
- Built workflow automation solutions using Power Automate, AutoHotkey, Python, PHP, JavaScript, SQL, and browser automation.
- Developed browser extensions and Fetch API integrations to automate repetitive Build Approval and engineering workflows.
- Designed Agentic AI workflows using n8n, Hermes Agent, Ollama, and LM Studio for engineering assistance and workflow automation.
- Integrated local large language models with engineering tools, APIs, and automation workflows.
- Analyzed Android APKs, Windows desktop applications, and Linux applications to understand system behavior and support automation or modernization initiatives.
- Rebuilt and modernized desktop tools using Rust and Tauri for cross-platform automation workflows.
- Implemented self-hosted engineering solutions using Linux, Docker, Cloudflare Tunnel, and internal web services.
- Used Apache JMeter and API testing approaches for performance testing, system validation, and basic security assessment.
- Collaborated with Product Engineering teams to improve software quality, release readiness, process efficiency, and engineering productivity.

Achievements

- Best Employee 2025 – Samsung Electronics Indonesia
- Samsung 10 Years Long Service Recognition Award
- Best Improvement Award – Air Quality Monitoring Network Implementation
- Innovation Award – Automated Rebuild and Retrieval System for Binary in Quickbuild: 49,896 Hours Saved
- Innovation Award – Streamlining File Organization with Automated Sorting Solutions: 17,846 Hours Saved
- Innovation Award – Implementing Ethernet Standardization for Optimizing Network Performance: 14,932 USD Impact
- Innovation Award – Web-Based Companion Release Reference Sheet: 1,393 USD Impact
- Innovation Award – Standardization USB 3.0 on Flashing ODIN Process: 696 USD Impact
- Innovation Award – Standardization SSD/NVMe M.2 for ODIN Binary Flashing Efficiency: 410 USD Impact

Education

Universitas Diponegoro

Semarang, Indonesia

Diploma 3 in Electrical Engineering

2012 – 2015

- Electrical and Electronics Engineering
- Industrial Automation Fundamentals
- PLC and SCADA Systems
- Industrial Control Systems
- Instrumentation and Electrical Systems

Projects

GBA Agentic Runner

Jan 2025 – present

Agentic AI worker platform for Google Build Approval engineering workflow automation using n8n, Hermes Agent, Ollama, and LM Studio.

- Designed and implemented Agentic AI workflows for Google Build Approval engineering processes.
- Built AI workflow orchestration using n8n and Hermes Agent.
- Integrated local large language models through Ollama and LM Studio for private and self-hosted AI execution.
- Developed AI-powered engineering assistants for task execution, documentation, workflow routing, and technical support.
- Connected AI agents with APIs, automation tools, and engineering workflows.
- Reduced repetitive manual activities through autonomous and tool-enabled workflow execution.
- Designed the platform to support local-first deployment, extensibility, and engineering productivity improvement.

FlashKit

Jan 2024 – present

Fully automated firmware flashing and Android device provisioning platform.

- Automated Android firmware flashing workflows.
- Reduced manual device provisioning effort.
- Improved flashing consistency and operational efficiency.
- Supported repeatable Android device preparation and validation processes.

ATM Launcher

Jan 2025 – present

Rust-based desktop automation dashboard for workflow execution and monitoring.

- Developed a modern desktop user interface using Rust and Tauri.
- Centralized automation workflow management and execution.
- Improved access to frequently used engineering tools and automation tasks.
- Designed a cross-platform architecture for desktop automation workflows.

Auto Fill Extension

Jan 2024 – present

Browser extension for automating Samsung Build Approval Server form submission.

- Reduced repetitive manual data entry.
- Improved process consistency and minimized human error.
- Integrated browser automation and Fetch API workflows.
- Automated form population and submission processes for engineering workflows.

Companion Release Cheatsheet

Jan 2025 – present

Release management and reference tracking web application.

- Centralized release documentation and reference information.
- Improved release traceability and team collaboration.
- Simplified access to frequently used release data.
- Reduced time spent searching for release-related information.

GBA Task Manager

Jan 2024 – present

Web-based project and task management system for Google Build Approval workflows.

- Improved task visibility, ownership, and coordination.
- Streamlined engineering workflow tracking.
- Centralized project and task information for Build Approval activities.
- Supported more consistent monitoring of engineering progress.

Warga Ambyar

Jan 2024 – present

Full-stack Node.js application for community and contribution management.

- Built a resident and community contribution management system.
- Implemented a full-stack architecture using Node.js and EJS.
- Developed workflows for member data and contribution tracking.
- Created a centralized interface for community administration.

Technical Interests

- Software Quality Engineering
- Agentic AI Engineering
- AI Agents and Autonomous Workflows
- n8n AI Workflow Automation
- Hermes Agent
- Local LLM Deployment with Ollama and LM Studio
- AI-Assisted Software Engineering
- Model Context Protocol and Tool-Enabled AI Agents
- Application Modernization
- Rust and Tauri Desktop Applications
- Browser Extension Development
- API Security and Performance Testing
- Self-Hosted Infrastructure
- Android Automation and Multi-Device Testing
- Industrial Automation and Smart Manufacturing

Skills

Software Quality Engineering: CTS, GTS, CTS Verifier, Google Build Approval, Android Validation, Software Validation, Root Cause Analysis, Test Automation, Release Readiness

Agentic AI & LLM Engineering: Agentic AI, AI Agents, Autonomous Workflows, n8n, Hermes Agent, Ollama, LM Studio, Local LLM Deployment, AI Workflow Automation, Prompt Engineering, Tool Calling, AI Agent Orchestration

Programming Languages: Python, PHP, JavaScript, TypeScript, Rust, SQL

Automation & RPA: Power Automate, AutoHotkey, Python Automation, Workflow Automation, Browser Automation, Process Automation, RPA, Task Orchestration

Android Engineering: ADB, Tradedef, Firmware Flashing, Device Provisioning, ODIN Process, Android APK Analysis, Multi-Device Testing

Application Analysis & Modernization: Android APK Analysis, Windows Desktop Application Analysis, Linux Desktop Application Analysis, Legacy Application Modernization, Rust/Tauri Migration, Cross-Platform Desktop Application Development

Browser & API Integration: Browser Extension Development, Chrome Extension Development, Fetch API, REST API Integration, WebSocket Integration, API Automation

Cybersecurity & Testing: Application Security Assessment, OWASP Principles, API Security Testing, Apache JMeter, Performance Testing, Vulnerability Analysis, Secure Development Practices

Industrial Automation: PLC Programming, SCADA Systems, Industrial Control Systems, Electrical Control Panels, Commercial Wiring, Industrial Instrumentation

Embedded Systems & IoT: Microcontroller Programming, ESP32, Arduino, Sensor Integration, Serial Communication, MQTT, IoT Systems

Infrastructure & DevOps: Linux, Ubuntu, Fedora, Docker, Cloudflare Tunnel, KVM Virtualization, Self-Hosted Services, Git, GitHub, Local AI Infrastructure

Smart Systems: Home Assistant, Frigate NVR, Smart Home Automation, Edge Computing

Languages: Indonesian Native, English Full Professional Proficiency

Certifications

- Google Build Approval AOSP – Samsung Electronics Vietnam
- Commercial Wiring – BLKI Semarang
- QEHS and ISO Training – Bina Profesi Institute - Konstan Group
- Rust Programming From Beginner to Advanced – Udemy
- Artificial Intelligence & Machine Learning – Udemy
- Software Development (Python, Go, Rust, PHP, Flutter, React Native, Elasticsearch) – Udemy
- Software QA & Test Automation (GenAI, Apache JMeter) – Udemy
- Cybersecurity & Ethical Hacking – Udemy
- Industrial Automation & Microsoft Power Automate – Udemy
- Project Management – Udemy
